

ESSIAW CHARLES JNR

Software Developer & Full-Stack Systems Engineer

Accra, Ghana (Remote & Relocation Ready) | +233 53 798 4448 | charlesessiawjnr@gmail.com
Portfolio: kojowallet01.github.io/essiawcharles | GitHub: github.com/kojowallet01 | LinkedIn: charles-essiaw

PROFESSIONAL SUMMARY

High-velocity Full-Stack Software Developer specializing in resilient web applications, real-time event-driven systems, and clean UI engineering. Proven track record architecting mission-critical production platforms including cloud restaurant POS/KDS systems, national emergency dispatch command software, and cryptographic QR access control. Extensive proficiency in TypeScript, Next.js (App Router), Supabase, PostgreSQL, Python, and Docker with an unwavering engineering commitment to sub-second latency, 100% Core Web Vitals, and modular, testable codebases.

TECHNICAL SKILLS & ARCHITECTURE MATRIX

Languages: TypeScript, JavaScript (ES6+), Python, SQL (PostgreSQL), HTML5, CSS3, Bash

Frontend

KEY ARCHITECTURAL SOFTWARE PROJECTS

Sweetbite Food POS & Kitchen Display System (KDS)

Active Production System

Next.js 14, TypeScript, Supabase Realtime, PostgreSQL, Tailwind CSS

- Real-Time Telemetry:** Architected an end-to-end synchronized cloud Point of Sale (POS) and Kitchen Display System (KDS) for busy food service operations, replacing physical paper tickets and eliminating kitchen communication bottlenecks.
- Sub-Second Synchronization:** Leveraged Supabase Realtime WebSocket channels with bi-directional state sync to broadcast order placement, modifications, and ticket status changes across kitchen stations with sub-500ms latency.
- Kitchen Operations UX:** Designed auditory kitchen alert chime systems, high-contrast touch ticket layouts, automated table-routing, and optimistic UI updates for seamless offline and reconnection recovery.
- Data Integrity:** Modeled relational PostgreSQL schemas with normalized order ticket states, line items, and station-routing tables to guarantee zero order collision during concurrent dining rushes.

Ghana Emergency Response & Dispatch Telemetry System

Live Deployment

TypeScript, JavaScript, Python, PostgreSQL, Geolocation API, WebRTC

- Rapid Citizen SOS:** Engineered a mission-critical emergency web application enabling instant geolocation-tagged SOS distress calls for rapid dispatch coordination of emergency response units across Ghana.
- Live Dispatch Telemetry:** Developed live coordinate telemetry with interactive mapping, geofencing, and instantaneous voice-note transmission, slashing incident verification and response coordination times.
- Offline Fault Tolerance:** Architected high-reliability client-side offline queues and service worker persistence to safely cache emergency distress requests under intermittent or severed cellular connectivity.
- Command Console:** Implemented administrative dispatch console allowing operators to triage incidents by severity, visualize proximity-based emergency units, and update live call statuses.

Patron Housing Access Control & Visitor Management

Production Solution

Python, PostgreSQL, Docker, QR Cryptographic Passports, Modern CSS

- Cryptographic Access:** Engineered automated residential access control platform handling digital visitor pass generation, security gate check-ins, and cryptographic QR code validation.
- Infrastructure & Ops:** Built centralized administrative dashboards with real-time entry/exit logs, resident authorization workflows, and Dockerized deployment on Render cloud infrastructure.
- Tamper-Proof Audit:** Implemented automated security revocation protocols and single-use digital visitor passes, preventing credential sharing and unauthorized residential access.

ARCHITECTURAL METRICS & PERFORMANCE BENCHMARKS

Sub-500ms Realtime Broadcast: Supabase WebSockets delivering concurrent kitchen order sync across busy restaurant stations.

100% Co

ENTERPRISE COMMERCIAL PLATFORMS & DEPLOYMENTS

BizConnect Technologies Enterprise Portal <i>Modern JavaScript, Accessible UI/UX, Performance Optimization, REST APIs</i> Zero-Bloat Engineering: Engineered enterprise corporate web platform for BizConnect Technologies featuring zero external bundle bloat, responsive layouts, and a perfect 100% Core Web Vitals audit. Enterprise Accessibility: Implemented WCAG 2.1 AA accessible typography, keyboard navigation, and semantic HTML structure to guarantee universal accessibility across enterprise clients. Lead Generation: Built modular component system and client-side contact inquiries API integration, driving a 35% increase in verified inbound enterprise leads.	Client Production
Kelrose Tours Travel & Itinerary Booking Platform <i>Dynamic JavaScript, Modern Responsive CSS, Tour Catalog kojowallet01.github.io/kelrose</i> Tour Architecture: Designed and deployed full-featured travel platform for Kelrose Tours featuring interactive tour itinerary catalogs, curated destination guides, and conversion funnels. Mobile Optimization: Optimized responsive layout, image delivery pipelines, and metadata indexing, enhancing organic search visibility and mobile user retention. Booking Operations: Configured automated inquiry workflows routing customer booking requests directly to operations staff via encrypted communication channels.	Client Production

PROFESSIONAL ENGINEERING EXPERIENCE & MILESTONES

Full-Stack Systems Engineer & Independent Developer <i>Autonomous Software Engineering & Client Solutions - Accra, Ghana</i> Full-Lifecycle Engineering: Lead the complete software engineering lifecycle for high-stakes web systems across hospitality, municipal emergency, and commercial enterprise sectors. Database & Cloud Delivery: Architect robust database models in PostgreSQL, implement secure role-based access control, write asynchronous event-driven services, and manage continuous deployment on cloud infrastructure. Client Excellence: Maintain a 5.0 Google client satisfaction rating across commercial engagements through meticulous requirement scoping, disciplined delivery timelines, and proactive communication.	2024 - Present
Commercial Web Engineer & Client Consultant <i>Freelance & Contract Engagements</i> Frontend Modernization: Consulted with SME business owners to modernize legacy web applications, migrate outdated static pages to interactive modern stacks, and optimize conversion funnels. Performance Engineering: Implemented performance audits and asset optimization techniques, reducing page load times by over 40% and achieving sub-second Largest Contentful Paint (LCP). Cross-Device Resilience: Delivered responsive UI components adhering strictly to mobile-first standards, testing across multi-device viewports and legacy browser runtimes.	2023 - 2024
Autonomous Software Apprenticeship & Foundations <i>Intensive Systems Engineering & Deliberate Practice (1,500+ Hours)</i> Theoretical Foundations: Completed rigorous self-directed engineering curriculum covering algorithmic complexity, asynchronous concurrency, network protocols (HTTP/REST/WebSockets), and relational database modeling. AI-Augmented Engineering: Pioneered AI-augmented development workflows, pairing with cutting-edge agentic tools to prototype, refactor, and rigorously stress-test codebases at accelerated speed. Community & Practice: Authored reproducible open-source web components and modular architectural blueprints shared with local developer communities in Accra.	2022 - 2023

EDUCATION, CERTIFICATIONS & CONTINUOUS MASTERY

Software Engineering & Systems Development <i>Autonomous Curricula, Open-Source Contributions & Professional Practice</i> - Continuous professional mastery in Next.js App Router, Advanced TypeScript Typing, PostgreSQL Query Optimization, and Cloud Native Deployments. - Committed to perpetual engineering refinement through daily deliberate practice, code review, architectural post-mortems, and modern web specifications.	Accra, Ghana
